

Mobile Application Development

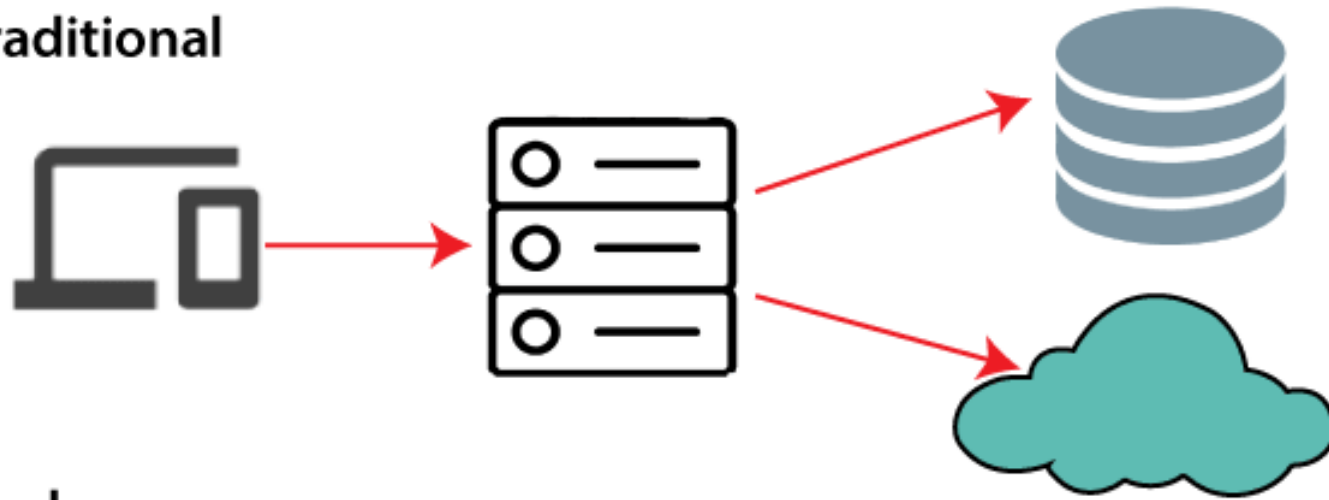

Firestore

Introduction to Firebase

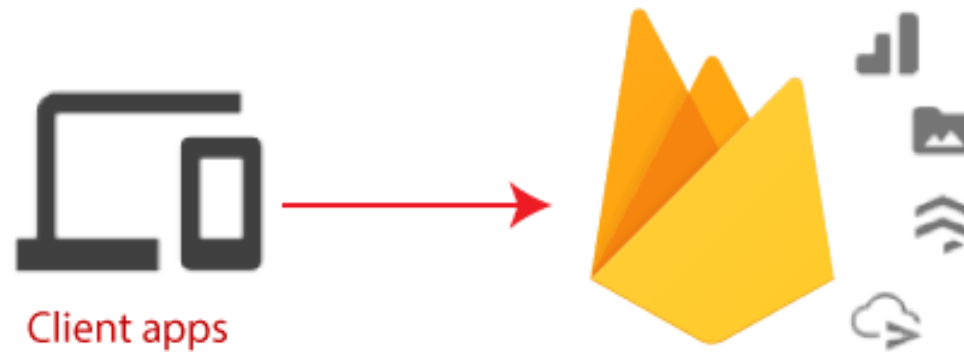

- Firebase is a Backend-as-a-Service(BaaS).
- It grew up into a next-generation app-development platform on Google Cloud Platform.
- Firebase (a NoSQLJSON database) is a real-time database that allows storing a list of objects in the form of a tree
- We can synchronize data between different devices.

Cloud Firestore

- Cloud Firestore is newer, but it is not replacing the Firebase Real-time Database.
- Cloud Firestore is a flexible as well as scalable NoSQL cloud database. It is used to store and sync data for client and server-side development.
- It is used for mobile, web, and server development from Google Cloud Platform and Firebase.
