Prayer Alarm

1.Introduction:

It can be difficult to recall daily prayers in our hectic academic lives. An approachable smartphone app to remind students of prayer times is provided by the Prayer Alarm initiative as a remedy. It encourages spiritual mindfulness in addition to academic endeavors with its motivational elements and individualized notifications. Our goal is to develop a product that enhances users' overall wellbeing while also meeting a technological necessity. Come along with us as we set out to balance spiritual commitment with academic excellence.

2.Abstract:

An app called Prayer Alarm is presented as a way for Muslim people to remember to pray every day even when they have a lot of work to do. By utilizing personalized alerts and inspirational elements, it seeks to promote spiritual awareness in addition to intellectual endeavors. The project aims to improve consumers' overall well-being while satisfying a technological requirement.

3.Objective:

The Prayer Alarm project aims to create a mobile application that serves as a reminder for students to pray every day, promoting spiritual attention in the midst of academic obligations. It strives to encourage regularity in prayer practice with features that are adjustable for notifications and motivation. The goal of the initiative is to give students a tool that fits in well with their daily routines and helps them better manage their time between spirituality and academic brilliance. Through tackling the difficulty of recalling prayers, it seeks to enhance users' overall health and spiritual satisfaction.

4.Problem Statement:

The challenge of students remembering daily prayers in the middle of busy academic schedules is the issue that the Prayer Alarm project attempts to solve. As a result, spiritual obligations are neglected and there is inconsistency. Reminder systems that are already in use frequently lack personalization and struggle to fit in with students' daily routines. As a result, a lot of students find it difficult to keep a healthy balance between their spiritual and intellectual endeavors. By offering a user-friendly solution that is customized to meet the needs of Muslim's people, The Prayer Alarm aims to close this gap and promote a harmonious integration of academic and spiritual life.

5.Expected Outcome:

Muslim Students who participate in the Prayer Alarm initiative should be equipped to continue praying every day in a deliberate and regular manner. Muslim Students will find it easier to fit their spiritual responsibilities into their hectic academic schedules by using the application. Increased spiritual contentment, better time management abilities, and a better feeling of balance between one's personal and academic lives are expected outcomes of this. In the end, the Prayer Alarm hopes to support students' overall wellbeing by encouraging a closer relationship with their faith while they work toward their academic objectives.

6.Components Used:

The components used in prayer alarm system are:

- 1.Android studio Iguana
- 2.AVD Emulator
- 3.Java
- 4.Linear layout in XML

7.Methodology:

The Prayer Alarm project's methodology entails:

1. Investigating user needs and currently available prayer reminder solutions.
2. Creating an interface for mobile applications that is easy to use.
3. Creating tools that allow notifications for prayer times to be customized.

4. Putting inspirational phrases and concepts into practice.
5. Using a Muslim student focus group, test the application.
6. Getting user input to improve the app iteratively and collecting feedback.
7. Making the finished version available to students for broad usage.

8.Conclusion:

In conclusion, we make the prayer alarm by using java code and xml linear layout in android studio. For this app is very useful for every Muslim people of worldwide because their busy schedule life they unable to offer the prayers. So, this app we alert the Muslim people to offer the prayer of Fajr, Zuhr, Asr, Magrahib, Isha and on Friday Namaz-e-Jumma.
