

Lab # 11

Connectivity of PHP and Query Language

Objective:

Students shall be able to do the following:

- Install Xampp Server
- Create mysql Database
- Connect the database using PHP.

Software Tools:

- ▶ Xampp Server
- ▶ Atom/ Notepad++

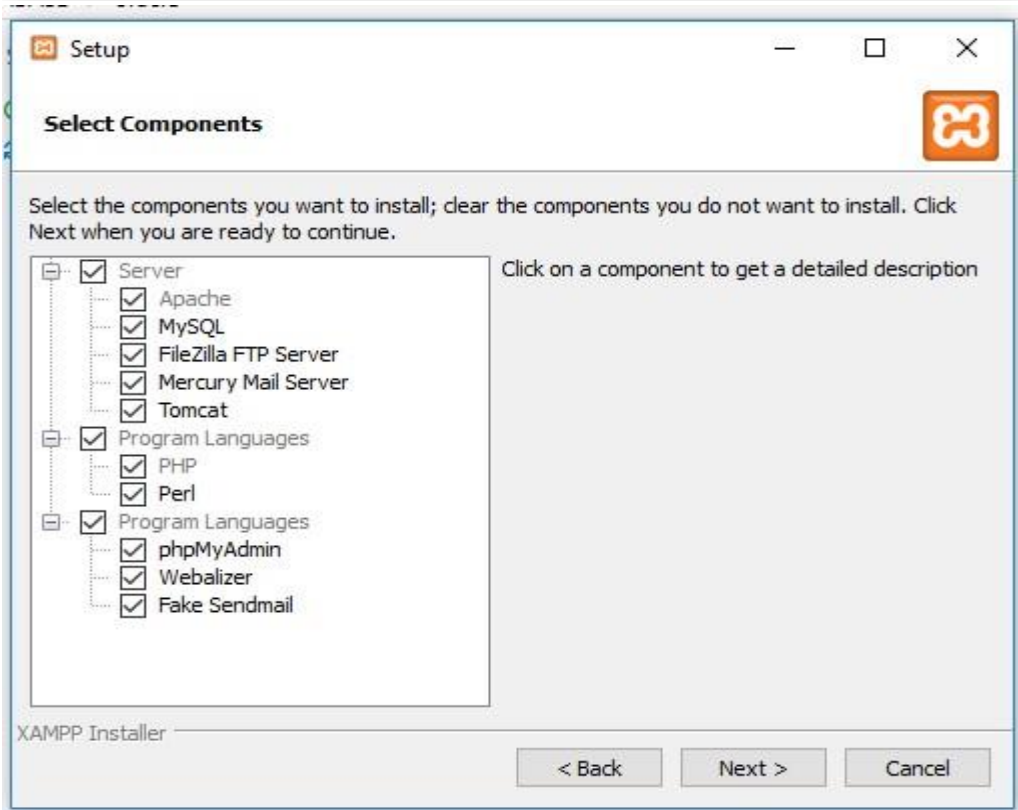

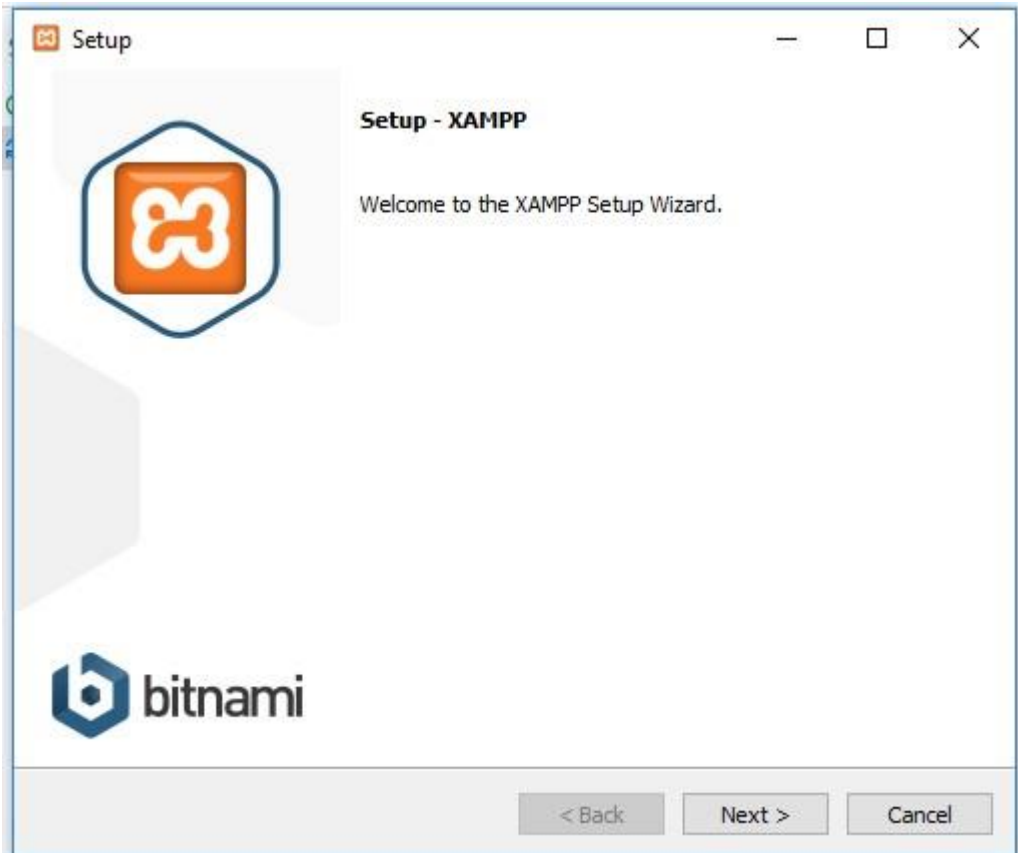

Theory:

- ▶ **XamppServer** is a Windows web development environment. It allows you to create web applications with Apache, PHP and a MySQL database. It also comes with PHPMyAdmin and SQLiteManager to easily manage your databases. **XamppServer** installs automatically (installer), and its usage is very intuitive.
- ▶ **PHP** (recursive acronym for **PHP: Hypertext Preprocessor**) is a widely-used open source general-purpose scripting language that is especially suited for web development and can be embedded into HTML.

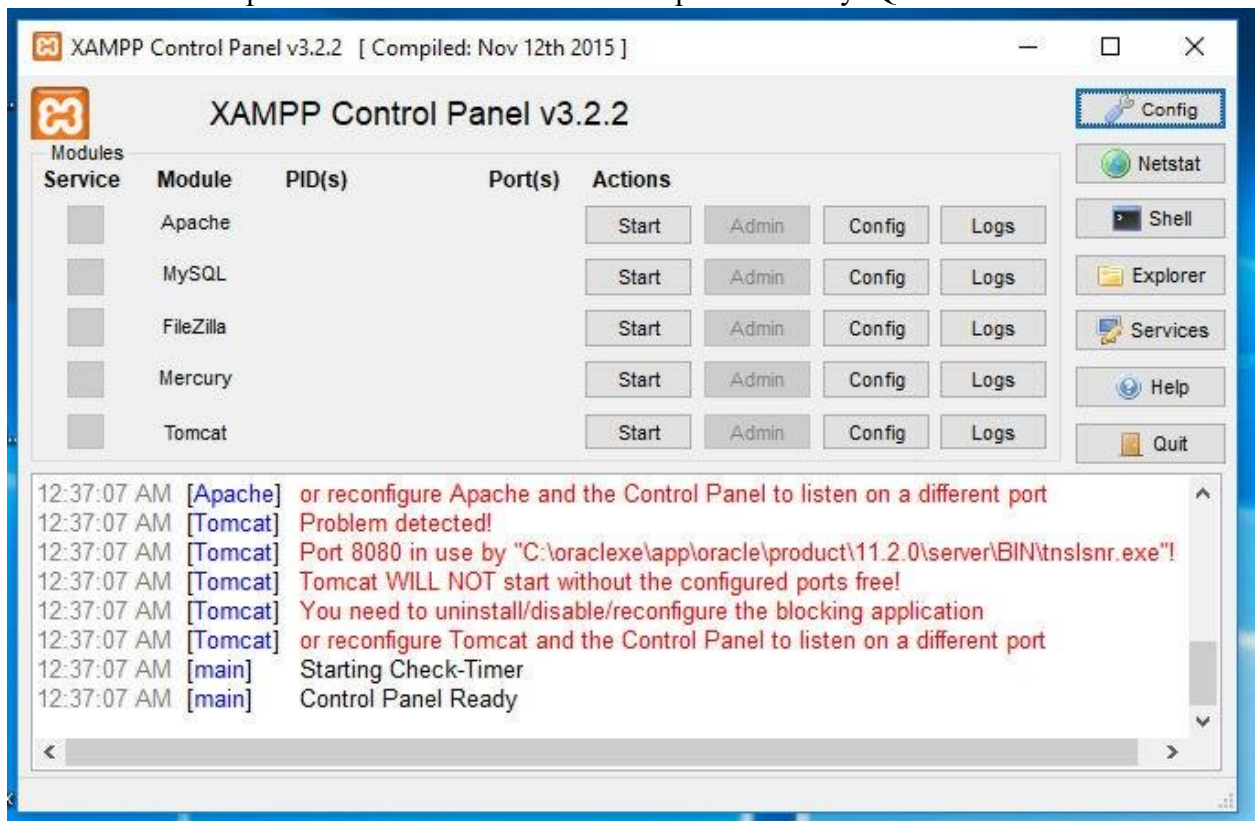

Lab Work

1. Install XAMPP Server

- i. Download XAMPP server from https://filehippo.com/download_xampp/

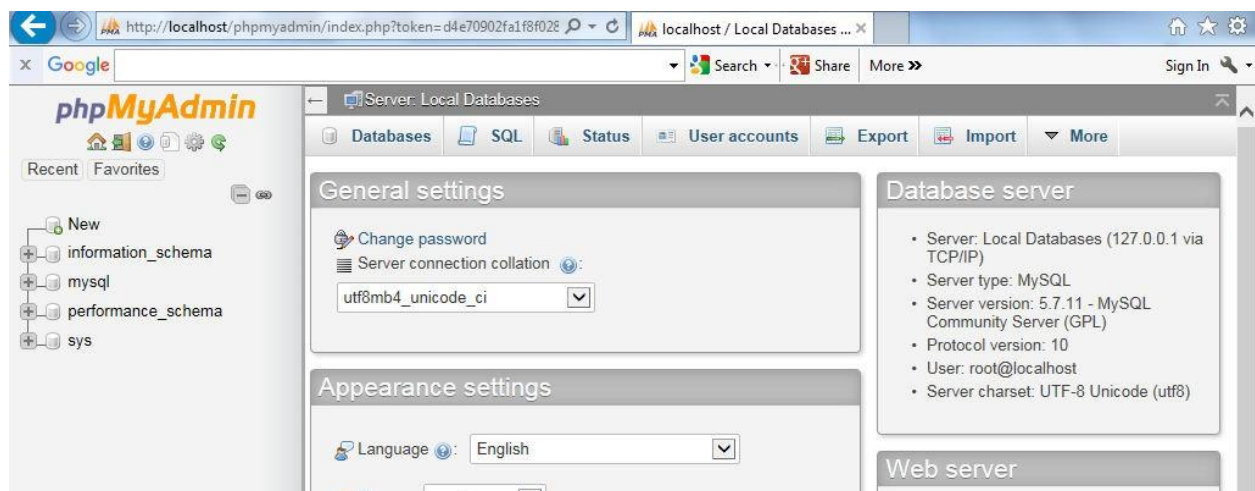

- ii. After installation open the XAMPP server start the apache and MySQL services.

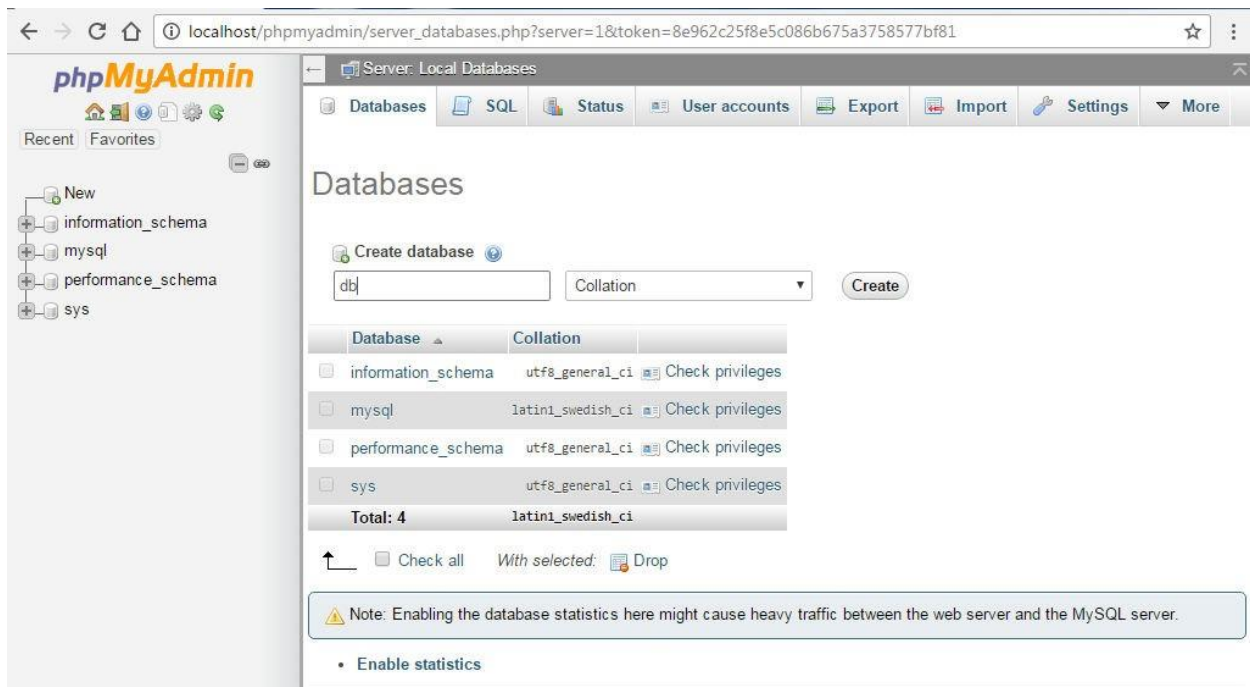

- iii. Open localhost/phpmyadmin

- iv. Write username: **root** and leave password box blank the below screen will appear

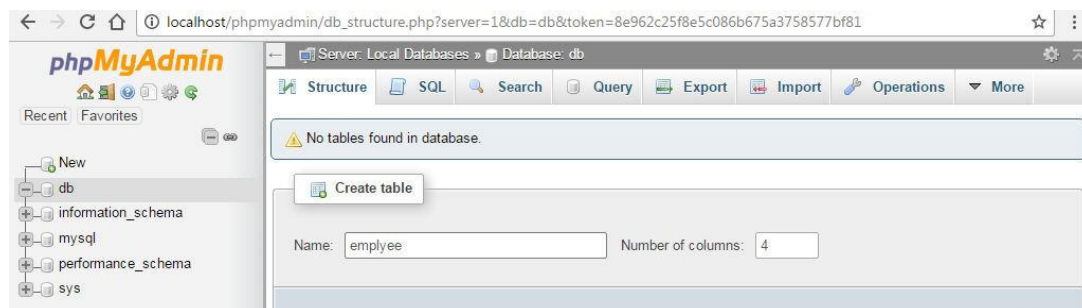

2. Creating Database

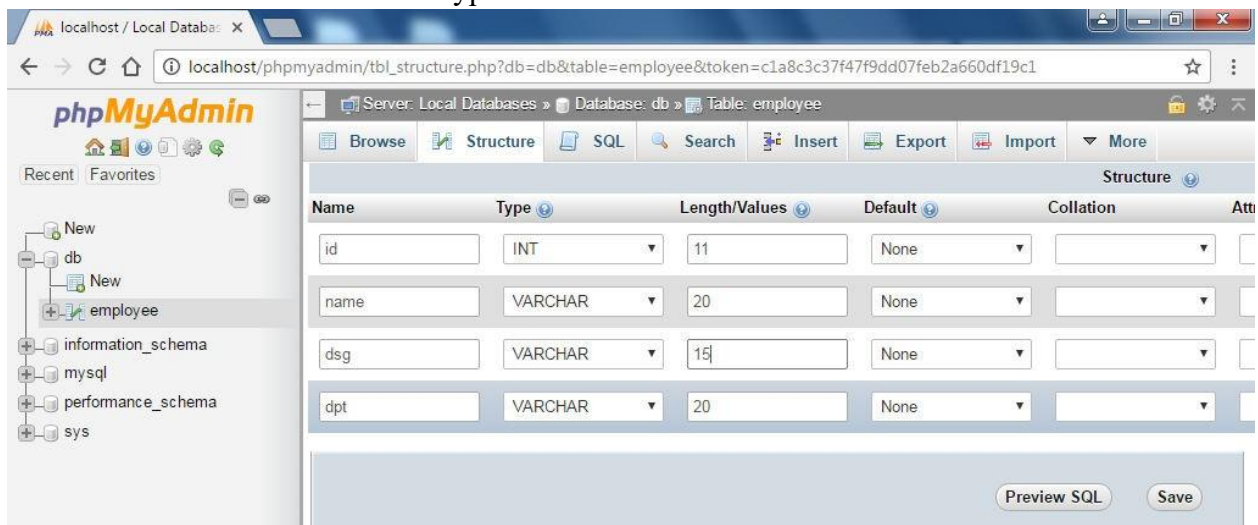

- v. Create new database named **db**

vi. Create table **employee** with 4 columns

vii. Define the data types

viii. The below table will be created

#	Name	Type	Collation	Attributes	Null	Default	Extra	Action
1	id	int(11)			No	None	AUTO_INCREMENT	Change Drop More
2	name	varchar(20)	latin1_swedish_ci		No	None		Change Drop More
3	dsg	varchar(15)	latin1_swedish_ci		No	None		Change Drop More
4	dpt	varchar(20)	latin1_swedish_ci		No	None		Change Drop More

☐ Check all With selected: ☐ Browse ☐ Change ☐ Drop ☐ Primary ☐ Unique ☐ Index

ix. Insert values

Server: 127.0.0.1 • Database: connect • Table: employee

Column Type Function Null Value

id int(50) 002

name varchar(100) basit

dep varchar(100) computer

phone int(100) 123456789

Go

☒ Ignore

Column Type Function Null Value

id int(50)

name varchar(100)

dep varchar(100)

phone int(100)

Go

3. Connect Database using the below PHP code

i. Write the below code to connect with the database.

```
<?php
echo "Welcome to the stage where we are ready to get connected to a database
<br>";

// Connecting to the Database
$servername = "localhost";
$username = "root";
$password = ""; // Enter your password here
$db = "db";

// Create a connection
$conn = new mysqli($servername, $username, $password, $db);

if ($conn -> connect_error){
    echo "Connection Failed!!". $conn -> connect_error;
```

```
}  
else{  
    echo "Connection was successful";  
}  
  
?>
```

LAB TASKS

- A. Create a database med_store
- B. Create table med(ID,Name,Price)
- C. Create table emp(ID, Name, Phone, Address, Salary)
- D. Connect the database med_store with php

Conclusion:
