

Lab # 12

Creation of Forms and Reports

Objective:

Students shall be able to do the following:

- Creates forms
- Post form values to the next page
- Insert the values in the database

Software Tools:

- ▶ Xampp Server
- ▶ Atom/Notepad ++

Theory:

- ▶ **XamppServer** is a Windows web development environment. It allows you to create web applications with Apache2, PHP and a MySQL database. It also comes with PHPMyAdmin and SQLiteManager to easily manage your databases. **XamppServer** installs automatically (installer), and its usage is very intuitive.
- ▶ **PHP** (recursive acronym for **PHP: Hypertext Preprocessor**) is a widely-used open source general-purpose scripting language that is especially suited for web development and can be embedded into HTML.

Lab Work

1. Form Creation

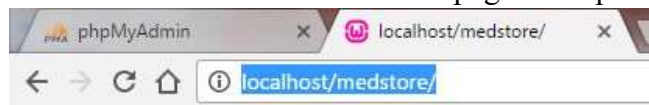

- i. Create form by writing below code

```

1  <!DOCTYPE html>
2  <html>
3  <head>
4    <title>Medical Store</title>
5  </head>
6  <body>
7    <center>
8      <h1>Medical Store</h1>
9      <p>please fill the form below</p>
10   <form action="formdata.php" method="post">
11     <label>Medicine Name:</label>
12     <input type="text" name="medname" placeholder="enter medicine name">
13   <br>
14   <label>Medicine Price:</label>
15   <input type="text" name="medprice" placeholder="enter medicine price">
16   <br>
17   <input type="submit" value="add">
18   </form>
19 </center>
20 </body>
21 </html>

```

- ii. Save file as index.php. When user opens a website the first page that opens is **index.php**. write localhost/medstore the index page will open

Medical Store

Please fill the below form to add a medicine

Medicine Name:

Medicine Price:

- iii. Create a file formdata.php in which the forms values will be posted

```

1  <?php
2  $n = $_POST["medname"];
3  $p = $_POST["medprice"];
4  echo $n;
5  echo "<br/>";
6  echo $p;
7  echo "<br/>";
8  include("connection.php");
9  $s="Insert into user(name,price) Values ('$n','$p')";
10 $query = mysqli_query($con,$s);
11 if(!$query)
12 echo mysqli_error($con);
13
14 ?>

```

- iv. Create a file connection.php to connect with your database on Xampp (same as you make in lab 11).

```

1  <?php
2  $servername="localhost";
3  $username="root";
4  $password="";
5  $db="medicalstore";
6  $con=new mysqli($servername,$username,$password,$db);
7  if ($con -> connect_error) {
8      echo "connection failed". $con -> connect_error;
9  }
10 else {
11     echo "Successfully Established";
12 }
13
14 ?>

```

- v. Check the database that med is inserted in med table or not.

Lab Tasks

- A. Create a form to enter course in the table given below.

#	Name	Type	Collation	Attributes	Null	Default	Extra
☐ 1	id	int(11)			No	None	AUTO_INCREME
☐ 2	name	varchar(20)	latin1_swedish_ci		No	None	
☐ 3	code	varchar(10)	latin1_swedish_ci		No	None	
☐ 4	cr_hrs	varchar(5)	latin1_swedish_ci		No	None	
☐ 5	ins_id	int(11)			No	None	

☐ Check all With selected: ☐ Browse Change Drop

B. Create a form to enter instructor in the table given below.

#	Name	Type	Collation	Attributes	Null	Default	Extra
☐ 1	id	int(11)			No	None	AUTO_I
☐ 2	name	varchar(20)	latin1_swedish_ci		No	None	
☐ 3	designation	varchar(20)	latin1_swedish_ci		No	None	
☐ 4	aoi	varchar(50)	latin1_swedish_ci		No	None	

☐ Check all With selected: ☐ Browse Change Drop
 Primary Unique Index Fulltext

Conclusion:
