

Lab # 13

Modification in Database Systems using PHP

Objective:

Students shall be able to do the following:

- Links pages with each other
- Retrieve values from the table
- Search records
- Delete records
- Update Records

Software Tools:

- ▶ Xampp Server
- ▶ Notepad++

Theory:

- ▶ Having easy-to-use navigation is important for any web site. A navigation bar is basically a list of links.
- ▶ **Data retrieval** means obtaining **data** from a database management system such as ODBMS. In this case, it is considered that **data** is represented in a structured way, and there is no ambiguity in **data**. In order to **retrieve** the desired **data** the user present a set of criteria by a query.
- ▶ Data Manipulation Language (DML) statements are used for managing data in database. DML commands are not auto-committed. It means changes made by DML command are not permanent to database, it can be rolled back.
- ▶ Update command is used to update a row of a table. Following is its general syntax,

UPDATE *table-name* set column-name = value *where condition*;

- ▶ Delete command is used to delete data from a table. Delete command can also be used with condition to delete a particular row. Following is its general syntax,

DELETE from *table-name* *where condition*;

Lab Work

1. Create Navigation

Write the below code in index file.

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>course management system</title>
5   </head>
6   <body align="center">
7     <h1>Course Management System</h1>
8     <a href="addcourseform.php"><h2>Add a course</h2></a>
9     <a href="addinstructorform.php"><h2>Add a instructor</h2></a>
10    <a href="viewcourse.php"><h2>view course</h2></a>
11    <a href="viewinstructor.php"><h2>view instructor</h2></a>
12    <a href="search.php"><h2>search course</h2></a>
13  </body>
14 </html>
```

Write localhost/lab14 and see the below screen will appear.

Course Management System

[Add a Course](#)

[Add an Instructor](#)

[View Courses](#)

[View Instructors](#)

[Search Course](#)

2. Data Retrieval

Create a new file view viewcourse.php

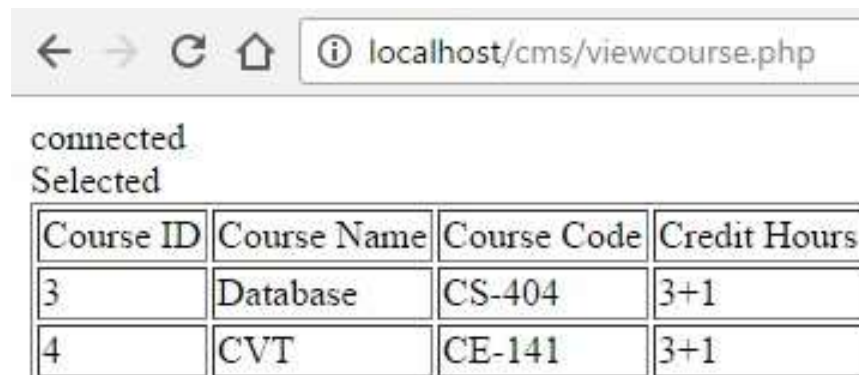

Write the code to retrieve the values from the database and display on the page.

```

9  <?php
10 include("connect.php");
11 $s="select * from course";
12 $query=mysqli_query($con,$s);
13 if(!$query(mysqli_error($con));
14 echo "<br>";
15 echo "<table table-border='1'>";
16 echo "<tr>
17     <td>course ID </td>
18     <td>course Name </td>
19     <td>course code </td>
20     <td>course ID </td>
21     <td>INS ID </td>
22 </tr>";
23 while($row=mysqli_fetch_array($query)) {
24     $id=$row["id"];
25     echo "<tr><td>".$row["id"]."</td>";
26     echo "<td>".$row["name"]."</td>";
27     echo "<td>".$row["code"]."</td>";
28     echo "<td>".$row["cr_hrs"]."</td>";
29     echo "<td>".$row["ins_id"]."</td>";
30     echo "</tr>";      }
31 echo "</table>";
32
33 ?>

```

View the result on browser.

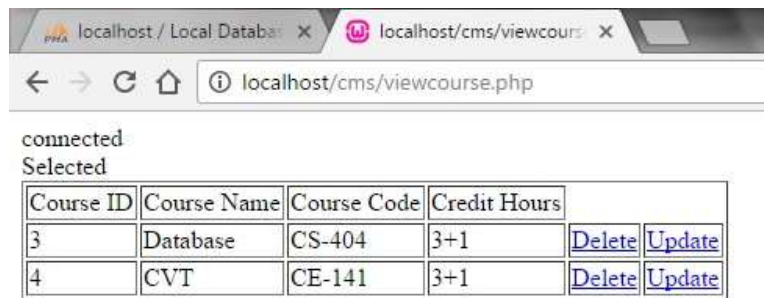

Course ID	Course Name	Course Code	Credit Hours
3	Database	CS-404	3+1
4	CVT	CE-141	3+1

3. Link Delete and Update Page

Change the content of viewcourse.php so that the delete and update page is linked.

```
9  <?php
10 include("connect.php");
11 $s="select * from course";
12 $query=mysqli_query($con,$s);
13 if(!$query)mysqli_error($con);
14 echo "<br>";
15 echo "<table table-border='1'>";
16 echo "<tr>
17     <td>course ID </td>
18     <td>course Name </td>
19     <td>course code </td>
20     <td>course ID </td>
21     <td>INS ID </td>
22     </tr>";
23 while($row=mysqli_fetch_array($query))
24 {
25     $id=$row["id"];
26     echo "<tr><td>".$row["id"]."</td>";
27     echo "<td>".$row["name"]."</td>";
28     echo "<td>".$row["code"]."</td>";
29     echo "<td>".$row["cr_hrs"]."</td>";
30     echo "<td>".$row["ins_id"]."</td>";
31     echo "<td><a href=delcourse.php?id=".$id.">Delete</a></td>";
32     echo "<td><a href=upcourse.php?id=".$id.">Update</a></td>";
33     echo "</tr>";
34 }
35 echo "</table>";
36 ?>
```

The below change will appear on the browser

Course ID	Course Name	Course Code	Credit Hours		
3	Database	CS-404	3+1	Delete	Update
4	CVT	CE-141	3+1	Delete	Update

4. Delete Records

Create a file **delcourse.php** and write the below code

```

1  <?php
2  $id=$_GET['id'];
3  include("connect.php");
4  $s="Delete from course where id='$id'";
5  $query=mysqli_query($con,$s);
6  if($query)
7  {
8      echo "record Delete<a href='viewcourse.php'>Click Here </a>to go back";
9  }
10 else {
11     echo "record not delete because".mysqli_error($con);
12 }
13
14 ?>

```

Click on delete and check the record is deleted or not.

5. Update Records

Create a file **upcourse.php**. Write the below code to update the record.

```

1  <?php
2  $id=$_GET['id'];
3  include("connect.php");
4  $s="Update course set code='CE', name='DBS', cr_hrs='3+1', ins_id='5' where id=$id ";
5  $query=mysqli_query($con,$s);
6  if($query)
7  {
8      echo "record updated<a href='viewcourse.php'>Click Here </a>to go back";
9  }
10 else {
11     echo "record not updated because"
12     .mysqli_error($con);
13 }
14 ?>

```

6. Search Records

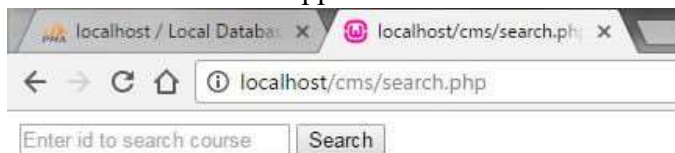

Create a page search.php and write the code on the browser.

```

1  <!DOCTYPE html>
2  <html>
3  <head>
4      <title>search</title>
5  </head>
6  <body>
7      <form action="searchcourse.php" method="post">
8          <input type="text" name="code" placeholder="Enter id to search course" >
9          <input type="submit" value="search">
10
11      </form>
12  </body>
13 </html>

```

The below result will appear on browser.

Create the file **searchcourse.php**

```

9  <?php
10 $id=$_POST["code"].'';
11 echo "search for id ".$id;
12 include("connect.php");
13 $s="select * from course where code
14     like '$id'
15     or name like '$id'
16     or id like '$id'
17     ";
18 $query=mysqli_query($con,$s);
19
20 echo "<br>";
21 echo "<table table-border='1'>";
22 echo "<tr>
23     <td>course ID </td>
24     <td>course Name </td>
25     <td>course code </td>
26     <td>credit hour </td>
27     <td>INS ID </td>
28     </tr>";
29
30 while($row=mysqli_fetch_array($query))
31 {
32     echo "<tr><td>".$row["id"]."</td>";
33     echo "<td>".$row["name"]."</td>";
34     echo "<td>".$row["code"]."</td>";
35     echo "<td>".$row["cr_hrs"]."</td>";
36     echo "<td>".$row["ins_id"]."</td>";
37     echo "</tr>";
38 }
39 echo "</table>";
40 ?>

```

Lab Tasks:

1. Write PHP code for insertion of instructor information in Xampp database.
2. Write PHP code for displaying of instructor information from Xampp database.
