

**Lab Report No _4_
Introduction to Proteus Software with examples
Embedded Systems**

Submitted By:

[Huzaifa Shahbaz]

[21-CE-009]

[Aqsa Shah]

[21-CE-039]

Submitted to:

Engr. Bushra Fiaz

Dated:

Week 05

**Department of Computer Engineering,
HITEC University, Taxila**

Lab Task No 1:

Solution:

Brief description (3-5 lines)

In this task I had to make schematic diagram by using the proteus software and also convert the schematic diagram into pcb diagram.

Schematic diagram

Schematic diagram of lab task 1

PCB DIAGRAM

PCB diagram of lab task 1

The results (Screenshot)

3D MODEL OF PCB DIAGRAM OF LAB TASK 1

Lab Task No 2:

Solution:

Brief description (3-5 lines)
In this task I had to make schematic diagram by using the proteus software and also convert the schematic diagram into pcb diagram. Show the output by flashing two LEDs with 555 Timer in Proteus ISIS by designing a circuit as well PCB layout shown in below figure.

The results (Screenshot)

Conclusion

In conclusion, Proteus is a versatile simulation software for designing and testing circuits before implementation. It integrates with microcontrollers like PIC, AVR, and Arduino, allowing efficient

simulation of LED blinking circuits and motor driver circuits. With an intuitive interface and extensive library, it's a valuable tool for beginners and professionals.
