LAB#2

Activity with GUI and Click Listener

Introduction:

The goal of this lab is to teach the skills necessary to create Activities in Android applications using the Android Studio Integrated Development Environment (IDE) and the Android Software Development Kit (SDK). This lab will provide an outline of Android Activity with GUI. Activity is one of the buildingblocks of Android OS. In simple words Activity is a screen that user interact with. Every Activity in android has lifecycle like created, started, resumed, paused, stopped or destroyed. Basic GUI components are TextViews, Buttons, Image Views and Fragments.

TOOLS:

Android Studio hedgehog

Home Task:

Create an simple “tasbeeh” app what update “tasbee” counter on press of each button press.

Java Code:

```
package com.huzaifashahbaz.madlab2;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.TextView;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {

    private int Counter = 0;

    @Override

    protected void onCreate(Bundle savedInstanceState) {

        super.onCreate(savedInstanceState);

        setContentView(R.layout.activity_main);

        Button buttons = findViewById(R.id.button);
```

```

        TextView txtview = findViewById(R.id.textView2);

        buttons.setOnClickListener(new View.OnClickListener() {

            @Override

            public void onClick(View view) {

                Counter++;

                txtview.setText(Integer.toString(Counter));

                Toast.makeText(MainActivity.this, "MashALLAH",
Toast.LENGTH_SHORT).show();

            }

        });

    }

}

```

XML CODE:

```

<?xml version="1.0" encoding="utf-8"?>

<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"

    xmlns:app="http://schemas.android.com/apk/res-auto"

    xmlns:tools="http://schemas.android.com/tools"

    android:layout_width="match_parent"

    android:layout_height="match_parent"

    android:background="#FFFFFF"

    android:backgroundTint="#FAFAFA"

    android:orientation="vertical"

    tools:context=".MainActivity">

    <Button

        android:id="@+id/button"

        android:layout_width="match_parent"

        android:layout_height="91dp"

```

```
        android:backgroundTint="#191719"

        android:text="Count"

        android:textSize="30sp" />

<TextView

    android:id="@+id/textView2"

    android:layout_width="399dp"

    android:layout_height="71dp"

    android:text="0"

    android:textColor="#000000"

    android:textSize="30sp" />

</LinearLayout>
```

OUTPUT:

CONCLUSION:

In conclusion, we learn how to make the tasbeeh counter and its working application and also we implement in Java and design in xaml.
