

ENGINEERING PROJECT MANAGEMENT

Lecture # 2 Organizing teams

DR SHAHBAZ ABBAS

DEPARTMENT OF ENGINEERING MANAGEMENT
NUST COLLEGE OF E&ME

Why do we need teams?

- You can't run most of the projects on your own.
- You simply will not have all the competences yourself to successfully complete the project.
- You need to form a team of people focused on the task at hand but also complementing your own skills and capabilities.

Types of Teams

Which type of team?

Football-type teams: highly structured teams with a detailed game plan.

Basketball-type teams: highly flexible teams in which joint improvisation is important for success.

Baseball-type teams: teams in which individual performance alternates with joint performance.

Tennis-type teams: teams in which individual performance is enhanced by a joint spirit.

When?

Operational projects that require simultaneous, well-coordinated efforts from a large number of people. An example is a so-called turnover project in the process industry.

Tactical projects that require flexibility through improvisation and adaptation to changing circumstances. Rescue operations are an example of such projects.

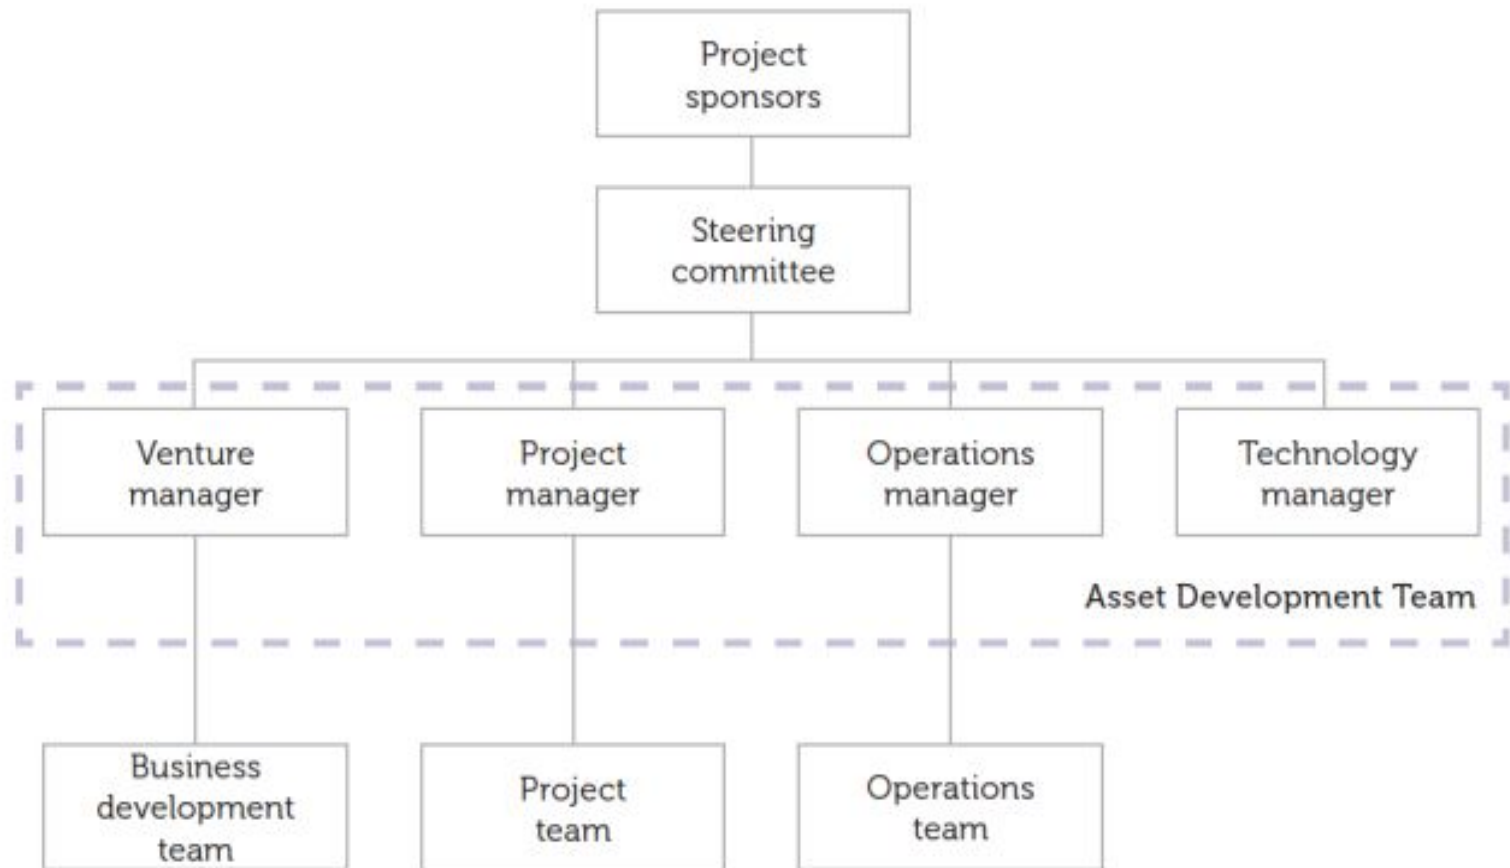

Technical projects that alternately require individual expertise and collective coordination. For example: product development projects.

Small projects that require most of all individual ingenuity, expertise and perseverance but cannot do without group support. For example: fundamental research projects.

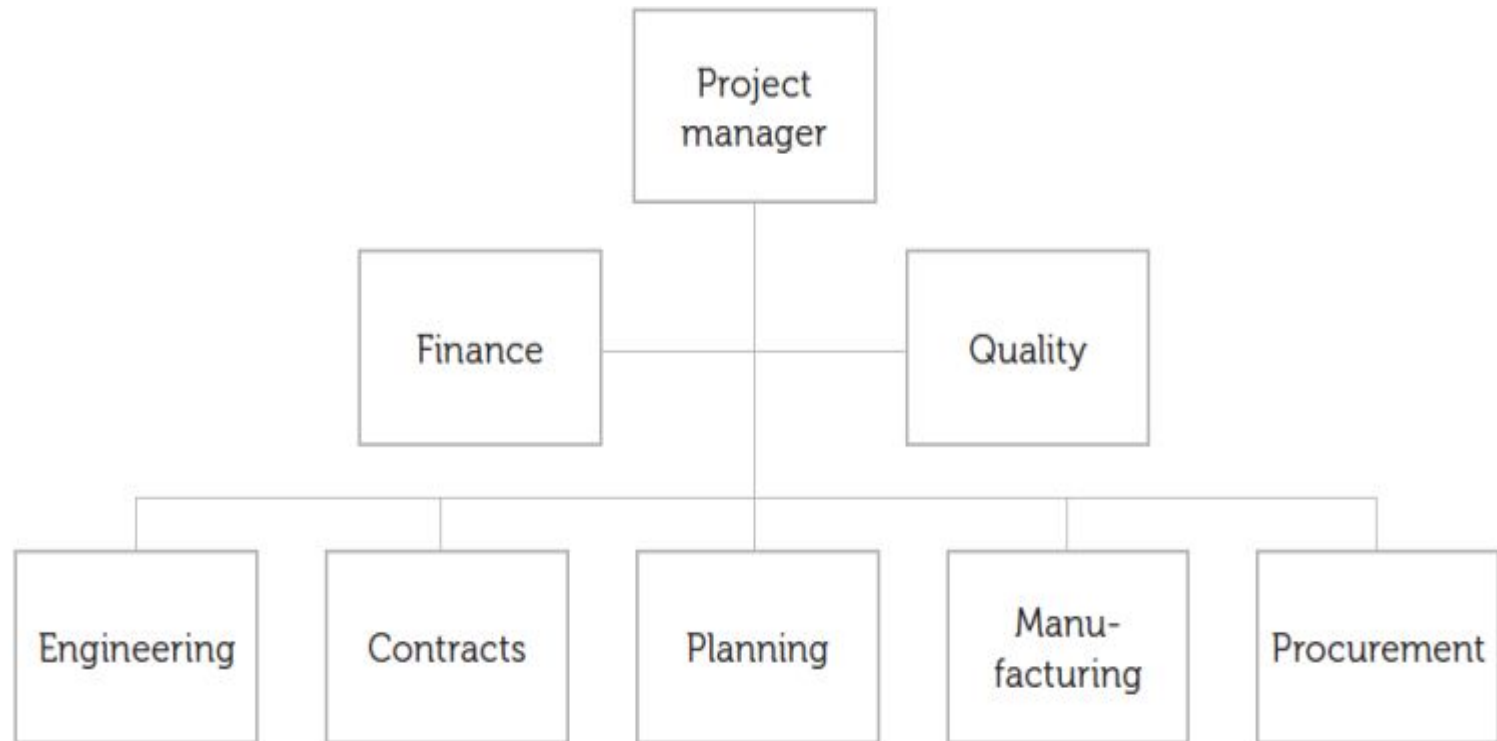

The challenges of building and leading teams

- Understand yourself
- The type of team required
- Select team members
- Mobilise team members
- Develop into a well-oiled machine

Venture team and governance

Project team with required functions

5 stages of teams development

- Forming

- *Trust and interpersonal relationship has to be built*
- *Team needs to find its place and so do the members of the team.*
- *Not much work will be achieved, but people will learn how to deal with each other.*
- *People are typically very much on their own, initially, feelings are not dealt with and weaknesses are covered up.*
- *This is probably a good time to agree the team charter.*

- Storming

- *People will start experimenting.*
- *Boundaries will be tested, feelings being raised and the concern for others will grow.*
- *Some stressful negotiations will take place in order to establish positions and mutual*
- *dependencies.*
- *The team feeling will grow and the charter will be tested and deepened.*

How to stimulate the team to reach a high performance level?

- *Endure stress and misfortune better*
- *Open up to other perspectives than the dominant team perspective*
- *Come up with a larger variety of solutions when they meet new problems*
- *Act more quickly when incidents occur*

5 stages of teams development

- Norming

- *Roles become accepted; the team starts developing based on agreed procedures, methodical working and established and tested ground rules.*
- *By now they are all working towards a common goal.*

- Performing

- *The team is fully effective and performing.*
- *More use is made of the abilities of the team members and the available energy.*
- *The needs of all participants are met and the social aspects are duly considered.*
- *The leadership style is appropriate to the phase the project has reached.*

5 stages of teams development

- **Adjourning**

- *The team will be disbanded and adjourn.*
- *One of the challenges for the project manager is to make sure all her team members, with whom she has worked for the duration of the project, find a new project or a new position in the line organization.*
- *The selection of her next team might be dependent on how she dealt with her previous staff.*
- *Adjourning may start rather early in the project if one or more team members leave the project and take on a new challenge.*
- *Adjourning ends when the team is fully disbanded.*

Discussion
