But it's not enough

Government responsibility (clear cyber laws)

Computer ethics in the workplace

Privacy Safety and
Data

Computer in workplace

Elimination of routine and manual jobs

Health and Safety

Computer failure

The Big Net

Almost all the Countries are now connected by the Internet. But there are no International laws to regulate the Issues of freedom of Speech, Intellectual Property rights , Privacy rights etc. Another development in this direction is, the universities offering degrees-on-line. Third world is certainly gaining Knowledge and education. Even Google. Com has announced plans to publish Research papers through the world wide Web. Knowledge is Power. Knowledge is Internationalised! Will this lead to empowerment of the Third World and Promotion of World peace? Only the future can answer this question.
