

Cyber Security Engineer – E■Test MCQs (with Solutions)

Q1. Which component of SIEM is responsible for real-time alerting?

- a Log Collector
- b Correlation Engine
- c Indexer
- d Dashboard

Correct Answer: Correlation Engine

Explanation: The correlation engine analyzes events in real time and triggers alerts based on defined rules.

Q2. What does SOAR primarily automate?

- a Threat intelligence feeds
- b Incident response workflows
- c Log storage
- d Firewall policies

Correct Answer: Incident response workflows

Explanation: SOAR platforms automate response actions, playbooks, and workflows during incidents.

Q3. Which protocol is commonly used for secure log forwarding?

- a FTP
- b Syslog over TLS
- c HTTP
- d SNMPv1

Correct Answer: Syslog over TLS

Explanation: Syslog over TLS ensures confidentiality and integrity of log data.

Q4. In SOC operations, MTTR refers to:

- a Mean Time To Respond
- b Maximum Threat Tolerance Rate
- c Mean Threat Transfer Rate
- d Managed Threat Tool Ratio

Correct Answer: Mean Time To Respond

Explanation: MTTR measures how quickly incidents are contained and resolved.

Q5. Which Fortinet product is primarily used as a firewall?

- a FortiAnalyzer
- b FortiGate
- c FortiSIEM
- d FortiClient

Correct Answer: FortiGate

Explanation: FortiGate is Fortinet's next-generation firewall platform.

Q6. What is the main goal of threat hunting?

- a Automated alerting
- b Proactive detection of hidden threats
- c Compliance reporting
- d Log retention

Correct Answer: Proactive detection of hidden threats

Explanation: Threat hunting focuses on proactively identifying threats that evade automated tools.

Q7. Which log source is MOST useful for detecting lateral movement?

- a Web server logs
- b Authentication logs
- c Printer logs
- d Backup logs

Correct Answer: Authentication logs

Explanation: Authentication logs reveal abnormal access patterns and credential misuse.

Q8. IDS differs from IPS because IDS:

- a Blocks traffic automatically
- b Only detects and alerts
- c Encrypts traffic
- d Manages users

Correct Answer: Only detects and alerts

Explanation: IDS is passive, while IPS actively blocks malicious traffic.

Q9. What does XDR stand for?

- a Extended Detection and Response
- b External Data Repository

- c Executable Defense Router
- d Extended Digital Recovery

Correct Answer: Extended Detection and Response

Explanation: XDR correlates data across endpoints, network, and cloud environments.

Q10. Root cause analysis is performed to:

- a Assign blame
- b Identify origin of an incident
- c Increase alerts
- d Close tickets quickly

Correct Answer: Identify origin of an incident

Explanation: RCA helps prevent recurrence by addressing the underlying cause.
