Last Week

- Operator overloading

This Week

- Class composition
- Operator overloading

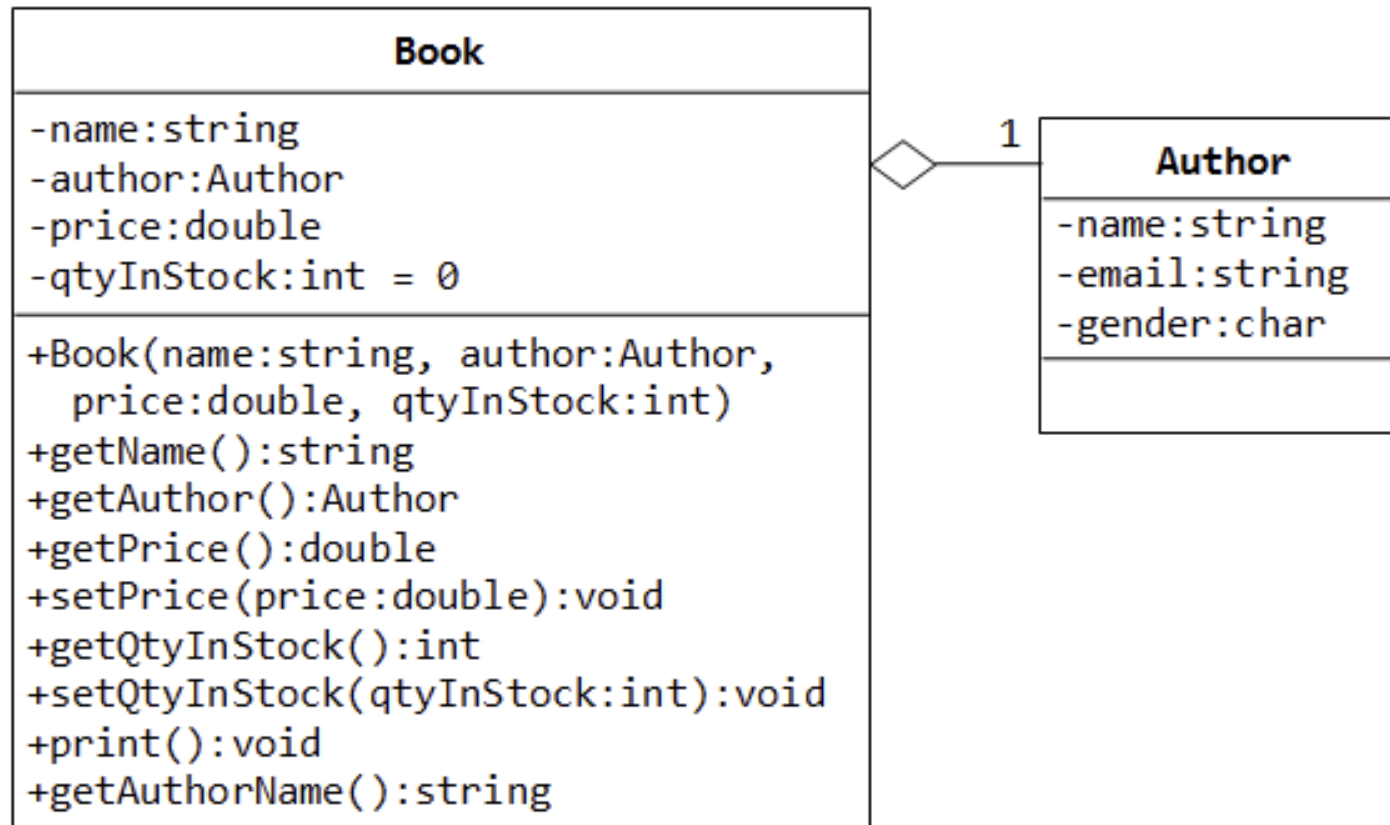

Quiz

- Q1 [CLO2] Marks = 100
- Apply the OOP concepts to create a class "Distance" which models distance. Start by drawing the class diagram. The class has two data members (kilo meters, and meters). Create a constructor to initialize data members to zero. Create another constructor to initialize data members to the values passed as arguments. Write a function to print the distance as:
 - Distance: 2.4 km

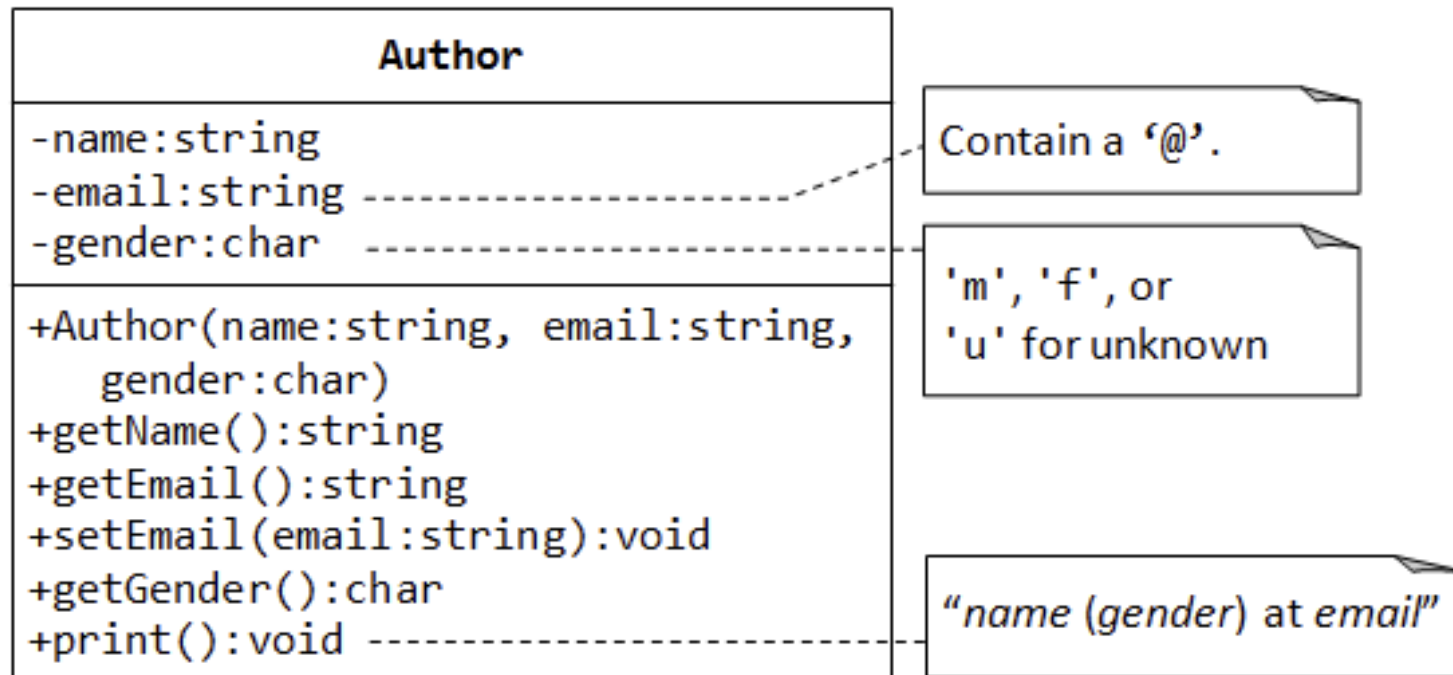

Matrix class

- Implement Matrix class
- Overload + and – operators to add and subtract matrices

OOP: Composition

OOP: Composition

Summary

- Operator overloading is an exciting C++ concept
- Improves program readability
