

NASTP Cyber Security – Technical Interview Drill

Question: Explain Zero Trust Architecture.

Answer: Zero Trust assumes no implicit trust and enforces continuous verification of users, devices, and applications.

Question: What is EDR vs XDR?

Answer: EDR focuses on endpoints; XDR correlates telemetry across endpoints, network, email, and cloud.

Question: How do you handle ransomware incidents?

Answer: Isolate systems, preserve evidence, eradicate malware, restore from backups, and conduct lessons learned.
