Problem Statement

- Why recognising rugby players is (almost) the same problem as *recognising handwritten digits*

2

Problem Statement

Can we LEARN to recognise a rugby player and ballet dancer?

What are the “features” of a rugby player?

01/12/2022

EC-350 AI and DSS

EME (NUST)

3

3

Features

Rugby players = short + heavy?

01/12/2022

EC-350 AI and DSS

EME (NUST)

4

4

Features

Ballet dancers = tall + skinny?

01/12/2022

EC-350 AI and DSS

EME (NUST)

5

5

Feature Space

Rugby players “cluster” separately in the space.

EME (NUST)

7

7

The K-Nearest Neighbour Algorithm

1. Measure distance to all points

01/12/2022

EC-350 AI and DSS

EME (NUST)

8

8

The K-Nearest Neighbour Algorithm

1. Measure distance to all points
2. Find closest "k" points

← (here $k=3$, but it could be more)

01/12/2022

EC-350 AI and DSS

EME (NUST)

9

9

The K-Nearest Neighbour Algorithm

1. Measure distance to all points
2. Find closest "k" points
3. Assign majority class

← (here $k=3$, but it could be more)

10

10

Distance Measure

“Euclidean distance”

$$d = \sqrt{(w - w_1)^2 + (h - h_1)^2}$$

01/12/2022

EC-350 AI and DSS

EME (NUST)

11

11

The K-Nearest Neighbour Algorithm

for each testing point

measure distance to every training point

find the k closest points

identify the most common class among those k

assign that class

end

- Advantage: Surprisingly good classifier!
- Disadvantage: Have to store the entire training set in memory

01/12/2022

EC-350 AI and DSS

EME (NUST)

12

12

Distance Measure

Euclidean distance still works in 3-d, 4-d, 5-d, etc....

$$d = \sqrt{(x - x_1)^2 + (y - y_1)^2 + (z - z_1)^2}$$

$x = \text{Height}$
 $y = \text{Weight}$
 $z = \text{Shoe size}$

01/12/2022

EC-350 AI and DSS

EME (NUST)

13

13

Features

Choosing the wrong features makes it difficult
 Too many features
 It's computationally intensive

Possible features:

- Shoe size ✓
- Height
- Age ✓
- Weight

17

17

Over-fitting

An Important Concept in Machine Learning

Looks good so far...

*Oh no! Mistakes!
What happened?*

We didn't have all the data.

We can never assume that we do.

This is called "OVER-FITTING"
to the small dataset.

EME (NUST)

18

18

Over-fitting

- While an overly complex boundary may allow perfect classification of the training samples, it is unlikely to give good classification of novel patterns

19

Our Problem

Now – how is this problem like
recognising handwritten
digits?

EME (NUST)

21

21

Recognising Handwritten Digits

Three dimensions...

This 3-pixel image is represented by a **SINGLE** point in a 3-D space.

01/12/2022

EC-350 AI and DSS

EME (NUST)

22

22

Recognising Handwritten Digits

Distances between images

A three-pixel image

Another 3-pixel image

Straight line distance
between them

01/12/2022

EC-350 AI and DSS

EME (NUST)

23

23

Recognising Handwritten Digits

Four dimensions? Five? Six-dimensional spaces?

A three-pixel image

A four-pixel image.

A five-pixel image

01/12/2022

EC-350 AI and DSS

EME (NUST)

24

24

Recognising Handwritten Digits

A four-pixel image.

A different four-pixel image.

(190, 85, 202, 10)
Same 4-dimensional vector!

Assuming we read pixels in a systematic manner, we can now represent any image as a single point in a high dimensional space.
