Professional Summary

Computer Engineer specializing in Embedded Systems, IoT Development, and Firmware Programming, with hands-on experience in PCB design, circuit analysis, and mobile app development. Skilled in both hardware and software integration, seeking an entry-level engineering role to apply technical expertise and contribute to innovative projects.

Technical Skills

- Programming: C/C++, Python, Java, Verilog HDL, HTML/CSS, PHP, XML
- Hardware & Design: PCB Design, Embedded Systems, AutoCAD, Circuit Analysis
- Development Tools: Arduino IDE, ESP-IDF, Android Studio, VS Code, MATLAB, Proteus, XilinxVivado
- Databases & Networks: MySQL, Cisco Packet Tracer, Network Design
- Platforms: Ubuntu OS, MS Visio, Figma
- Project Management Tools: Click Up, Online Documentation, Research Tools

Work Experience

Engineering Intern – MachaDev, Pakistan | Jul 2025 – Present

- Assisted in IoT and embedded system development projects.
- Contributed to firmware coding and hardware-software integration.

Engineering Intern – RISETECH, Pakistan | Jun 2024 – Aug 2024

- Supported team in PCB design, network configuration, and circuit simulations.
- Conducted testing and debugging for embedded projects.

Trainee – Research & Development (R&D)-MachaDev, Pakistan | September 2025 – November 2025

- Working on Smart Water Monitoring & Purification Device under R&D division.
- Conducting online and experimental research on purification technologies and water quality sensors.
- Developing firmware using ESP-IDF for IoT-based water quality measurement modules.
- Managing documentation and project tracking using Click-Up.
- Strengthened expertise in Research & Development (R&D), Firmware, and IoT ecosystems.

Education

- Bachelor of Science in Computer Engineering, 2025 – HITEC University, Taxila
- Consistently ranked in Top 10% of class for four consecutive years
- Higher Secondary Certificate (Pre-Engineering) – APSACS EME College, Rawalpindi | 2019 – 2021

Projects

- IoT-Based Air Quality Index Meter System (FYP): ESP32, MQ sensors, Firebase, real-time monitoring.
- Lung Segmentation from Chest X-rays: Implemented using Python & MATLAB.
- Traffic Control System: Digital system design with Xilinx Vivado.
- 4-bit Multiprocessor Design: Verilog HDL-based processor design.
- Automatic Vehicle Speed Controller: Arduino & Proteus simulation.
- Prayer Alarm Mobile App: Developed with Java, XML in Android Studio.
- Online Library Management System: MySQL, HTML, CSS, PHP.
- Speech Recognition System: Python-based voice recognition.
- Banking Management System: Object-oriented C++ application.
- Smart Water Monitoring & Purification Device: ESP32 with pH sensor

Core Competencies

Embedded Systems | IoT System Design | Firmware Development | Mobile App Development |

Digital Signal Processing | Hardware-Software Integration | Database Management | Circuit Design & Analysis

About Me

I am a fresh computer engineer, with dedicated approach, always eager to learn more and accept challenges. Keen to do projects including hardware and software, software and mechanical engineering software and also non-technical projects. Two times participated in comppec in speed programming and one time code-war. Consistently focusing on latest research and development projects in my field. I always work in harmony with my colleagues. Love to do sports.
