

ISO 45001:2018 Implementation

Ruth Wilkinson, BSc (Hons), MSc, CMIOSH
Head of Health and Safety

ISO 45001:2018

Implementation

**Occupational health and safety
management systems standard –
Requirements with guidance for use**

ISO 45001:2018

Outline

- Why is a new standard needed?
- An overview of the structure of the ISO 45001:2018 standard
- Overview of the key requirements of the standard
- Review some key requirements from an implementation perspective.

ISO 45001:2018

Global toll

- 2.78 million people killed by work accidents and disease
- 7,600 deaths per day (~ one every 12 seconds)
- 374 million non-fatal work accidents
- 2.4 million people killed by occupational disease
- ~ 4% of world GDP = work accidents and diseases

Source: ILO 2017

ISO 45001:2018

Benefits of safety and health management

- Humanitarian (less work-related injury, illness and death)
- Business:
 - productivity and profitability
 - customer and worker loyalty
 - reputation, resilience and results

ISO 45001:2018

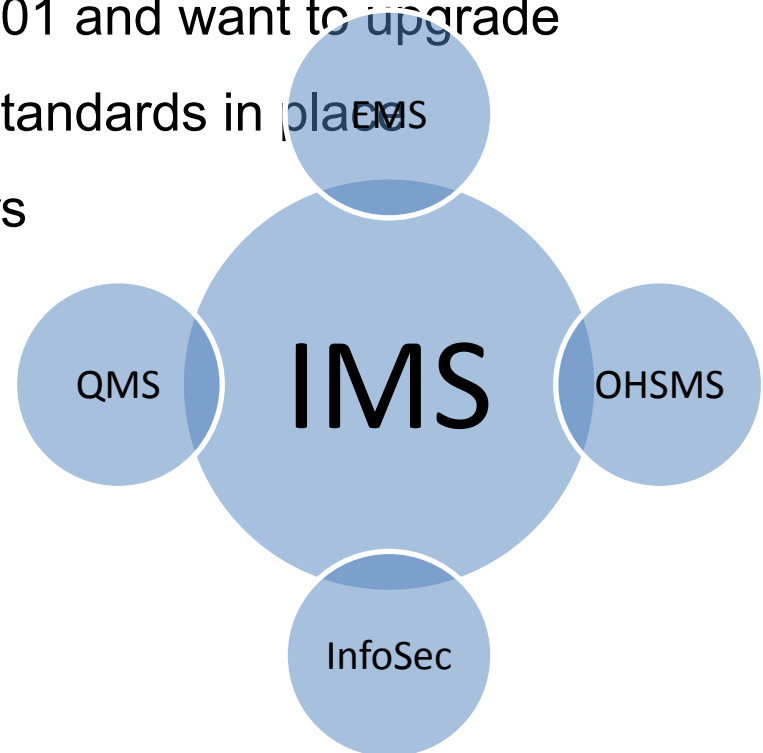

Why is a new standard needed?

- Global toll of safety and health failures
 - OHSAS 18001 – well used, but not an agreed international standard
 - Alignment with other management standards and aids integration
-
- ISO 45001 looks at the interaction between an organisation and its business environment (i.e. H&S is part of an overall business mgt system).

ISO 45001:2018

Why choose ISO 45001?

- Provision of a safe and healthy workplace
- Enables H&S to be integrated with other aspects, such as worker wellness/wellbeing.
- Organisations with OHSAS 18001 and want to upgrade
- Organisations have other ISO standards in place
- Requirements of their customers
- Global market opportunities
- Reputation
- Strategic consideration

ISO 45001:2018 clauses

Based on Annex 'SL'

- 1 Scope
- 2 Normative references
- 3 Terms and definitions
- 4 Context of the organisation
- 5 Leadership [and worker participation]
- 6 Planning
- 7 Support
- 8 Operation
- 9 Performance evaluation
- 10 Improvement

Annex A – Guidance on the use of the standard

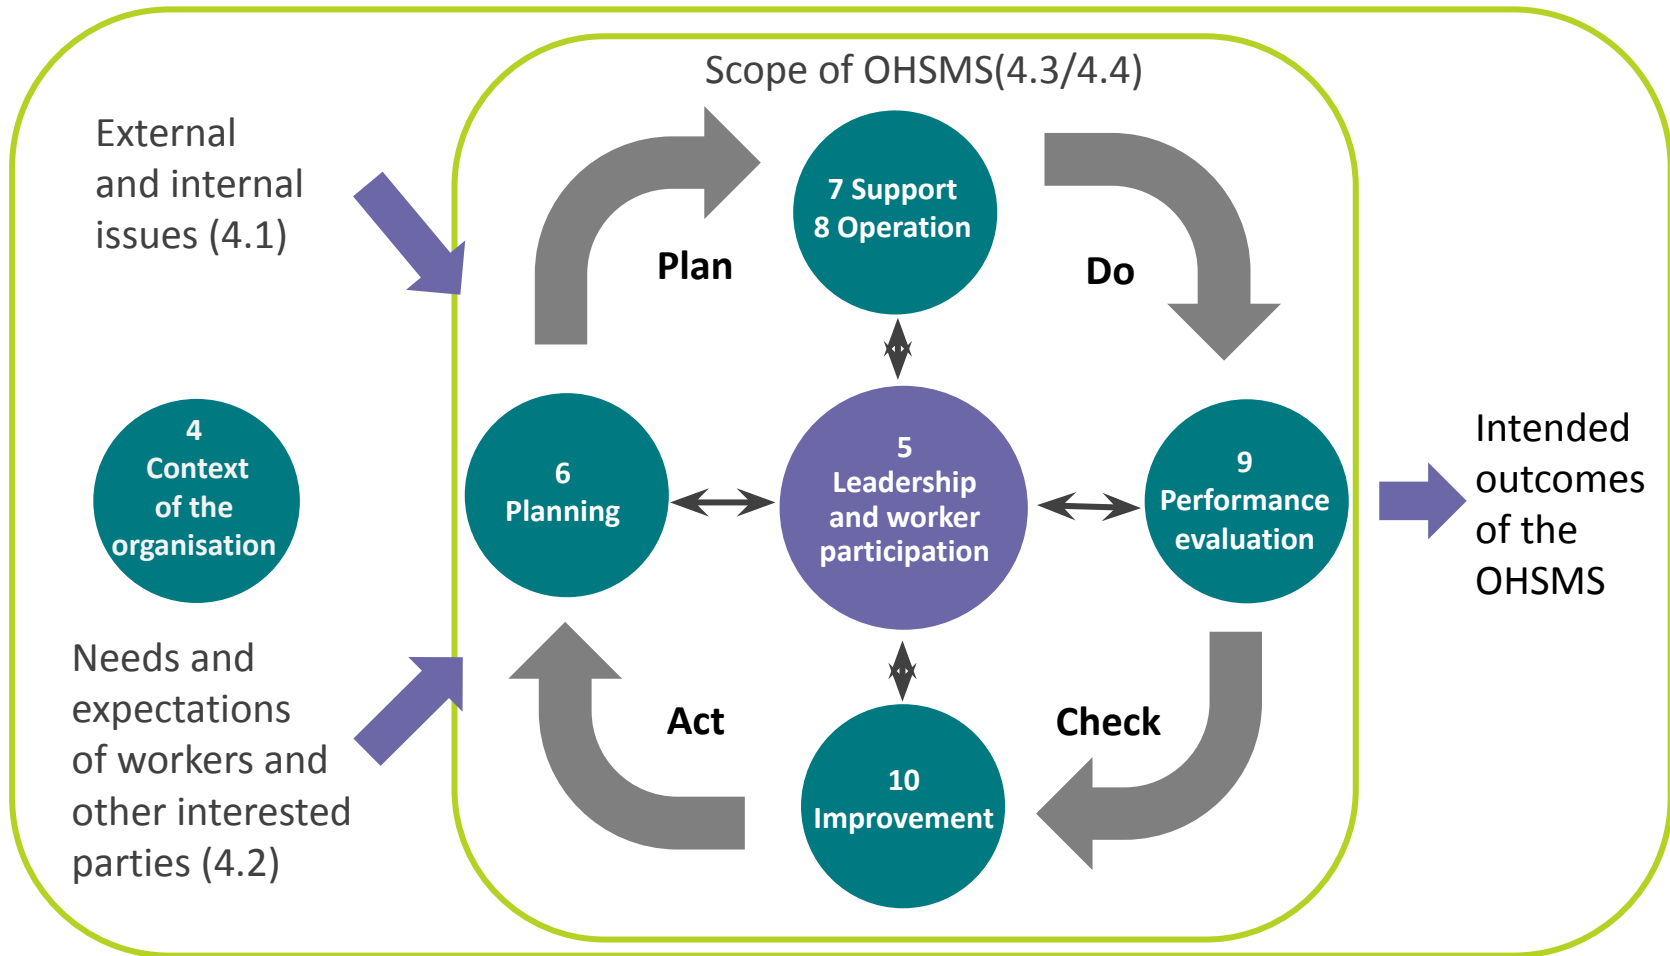

ISO 45001

Aims to help organisations

- Minimise H&S risks
- Integrate H&S into overall business processes
- Provide platform for continual improvement
- Improve H&S performance to provide a safe and healthy workplace.

ISO 45001:2018

ISO 45001 vs OHSAS 18001

- Context
- Leadership
- Documented information
- More on:
 - worker participation
 - continual improvement
 - hierarchy of control
 - risk and opportunities
 - compliance status
 - supply chain
 - KPIs

Context of the organisation

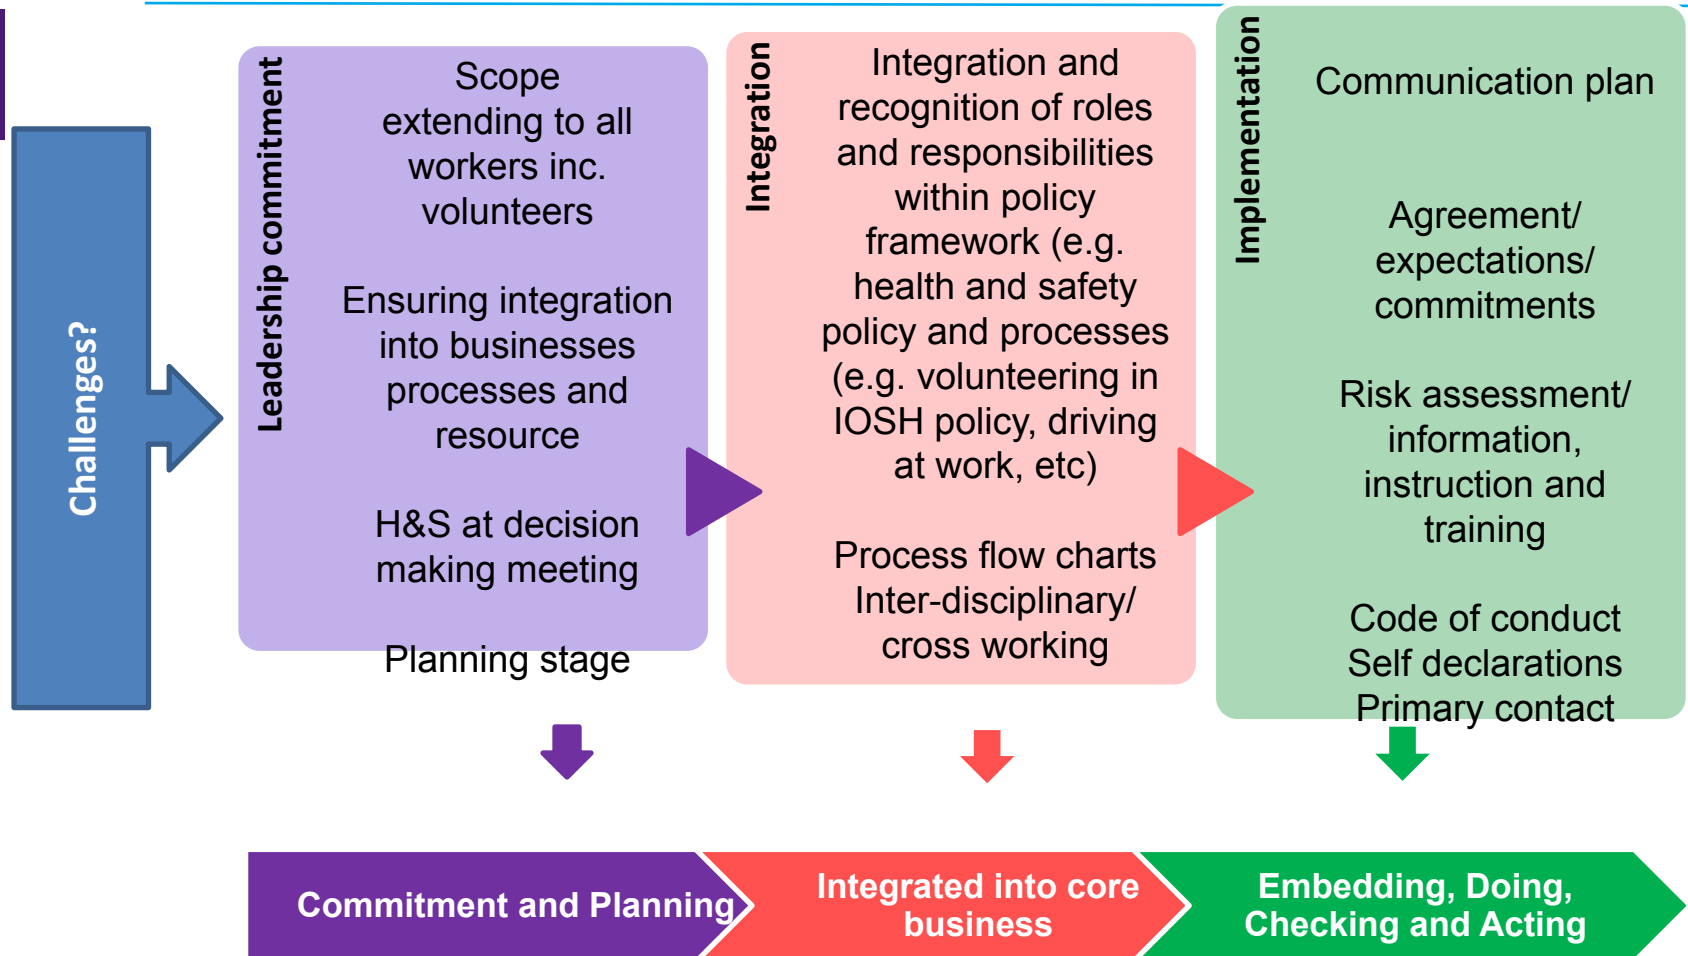

[^] workers, owners, financiers, customers, local community, regulators, competitors, Suppliers, contractors, subcontractors, work reps,, etc and of those who is relevant to the OHSMS.

* Political/Economic/Social/Technological/Legal/Environmental – for external issues

Internal Issues – e.g. governance, strategies, culture, activities, products, services, participation...

'Volunteers'

ISO 45001:2018

Leadership

- Certain clauses require action by top management which may not be delegated to others.

*Developing, leading and promoting a **culture**...that supports the intended outcomes of the OHSMS.*

- Removal of the 'management representative' – now undertaken by top management itself

Documented evidence

- OH&S Policies, objectives are established (e.g. *responsibilities, involved, engaged and accountable*)
- Integration
- Resources are available
- OHSMS outcomes

ISO 45001:2018

Worker participation

- Two-way
- Involve non-managerial personnel (or their reps)
- Removal of obstacles and barriers (e.g. ignoring worker input)
- Provision of resource - time, training and information
- Workers aware they can stop working with no fear of reprisal if a hazardous situation arises.
- Must establish processes for consultation (e.g. implies two-way comms so workers or their rep can provide feedback)
- Must establish processes for participation (e.g. implies the contribution of workers or their reps).

ISO 45001:2018

Risks and opportunities

- Required to consider the context (4.1), the ‘relevant’ requirements of their interested parties (4.2) and the scope for their OHSMS (4.3) when determining risks and opportunities e.g. thinking about internal and external issues you may face and the impact it may have on systems and processes.
- For every external and internal issue/ need and expectation of interested parties – a risk source may be identified.
- Should be carried out at both strategic (‘others risks to OHSMS’ and ‘other opportunities to the OHSMS’ and operational levels (‘OH&S risks’ and ‘OH&S opportunities’).
- Remember ‘workplace’ definition.
- Be proportionate.

ISO 45001:2018

Making it happen

- Arrived 12 March 2018
- Overwhelming support for publishing
- OHSAS 18001 now withdrawn
- Read and understand ISO 45001 requirements
- 3-year migration period
- Identify and address gaps
- Remember root cause identification in investigation process
- Certification bodies can help

ISO 45001:2018

Tips

- Secure commitment
- Gap analysis
- Involve/ integrate with your colleagues/disciplines
- Project management – planning
- Simplification
- Think about how you document your evidence and make it relevant to you
- Make choices that are right for the business and sustainable
- Raise awareness
- Upskill as needed:
 - Safety and health professionals

ISO 45001

Opportunity to improve

- Good safety and health management systems and cultures help organisations to:
 - prevent injury, illness and death
 - improve reputation, resilience and results

A photograph of a person's hand raised in the air, likely in a classroom or meeting. The hand is open, with fingers spread. The background is a bright, slightly blurred indoor space with a white ceiling and some equipment. The overall tone is professional and interactive.

Thank you

Any questions?
