2009-01-08

ISO 9001 and ISO 14001 in brief

- ISO 9001 and ISO 14001 are among **ISO's most well known standards** ever.
- They are implemented by more than a million **organizations** in some **175 countries**.
- **ISO 9001** helps organizations to implement **quality management**.
- **ISO 14001** helps organizations to implement **environmental management**.

Quality management

- ISO 9001 is for **quality management**.
- **Quality** refers to all those features of a product (or service) which are required by the customer.
- **Quality management** means what the organization does to
 - ensure that its products or services satisfy the customer's **quality requirements** and
 - comply with any **regulations** applicable to those products or services.

Quality management *(cont.)*

- Quality management also means what the organization does to
- enhance **customer satisfaction**, and
- achieve **continual improvement** of its performance.

Environmental management

- ISO 14001 is for **environmental management**. This means what the organization does to:
- **minimize harmful effects** on the environment caused by its activities,
- to conform to applicable **regulatory requirements**, and to
- achieve continual improvement of its **environmental performance**.

Generic standards

ISO 9001 and ISO 14001 are **generic** standards.

Generic means that the same standards can be applied:

- to **any organization**, large or small, whatever its product or service,
- in **any sector** of activity, and
- whether it is a business enterprise, a public administration, or a government department.

Generic standards *(cont.)*

Generic also signifies that

- no matter what the organization's scope of activity
- if it wants to establish a **quality management system**, ISO 9001 gives the essential features
- or if it wants to establish an **environmental management system**, ISO 14001 gives the essential features.

Management systems

- **Management system** means what the organization does to manage its processes, or activities in order that
- its products or services meet **the organization's objectives**, such as
- satisfying the **customer's quality requirements**,
- complying to **regulations**, or
- meeting **environmental objectives**

Management systems

- To be really efficient and effective, the organization can manage its way of doing things by **systemizing** it.
- Nothing important is left out.
- **Everyone is clear about who is responsible** for doing what, when, how, why and where.
- Management system standards provide the organization with an international, state-of-the-art **model** to follow.

Management systems (*cont.*)

- Large organizations, or ones with complicated processes, could not function well without management systems.
- Companies in such fields as aerospace, automobiles, defence, or health care devices have been operating management systems for years.
- The **ISO 9001** and **ISO 14001** management system standards now make these successful practices available **for all organizations**.

Processes, not products

- Both ISO 9001 and ISO 14001 concern **the way an organization goes about its work.**
- They are not product standards.
- They are not service standards.
- They are **process** standards.
- They can be used by **product manufacturers and service providers.**

Processes, not products (*cont.*)

- Processes affect final products or services.
- **ISO 9001** gives the requirements for what the organization must do to manage **processes affecting quality** of its products and services.
- **ISO 14001** gives the requirements for what the organization must do to manage **processes affecting the impact of its activities on the environment**.

Certification and registration

- **Certification** is known in some countries as **registration**.
- It means that an **independent, external body** has audited an organization's management system and verified that it conforms to the requirements specified in the standard (ISO 9001 or ISO 14001).
- **ISO does not carry out certification** and does not issue or approve certificates,

Accreditation

- **Accreditation** is like certification of the certification body.
- It means the formal approval by a specialized body - an accreditation body - that a certification body is competent to carry out ISO 9001:2008 or ISO 14001:2004 certification in specified business sectors.
- Certificates issued by accredited certification bodies - and known as **accredited certificates** - may be perceived on the market as having increased credibility.
- **ISO does not carry out or approve accreditations.**

Certification not a requirement

- **Certification is not a requirement of ISO 9001 or ISO 14001.**
- The organization can implement and benefit from an ISO 9001 or ISO 14001 system without having it certified.
- The organization can implement them for the **internal benefits** without spending money on a certification programme.

Certification is a business decision

- Certification is a **decision to be taken for business reasons:**
- if it is a contractual, regulatory, or market requirement,
- If it meets customer preferences
- it is part of a risk management programme, or
- if it will motivate staff by setting a clear goal.

ISO does not certify

- **ISO does not carry out ISO 9001 or ISO 14001 certification.**
- ISO does not issue certificates.
- ISO does not accredit, approve or control the certification bodies.
- ISO develops **standards and guides to encourage good practice** in accreditation and certification.

The ISO 9000 family

- **ISO 9001** is the standard that gives the requirements for a **quality management system**.
- **ISO 9001:2015** is the latest, improved version.
- It is the **only standard** in the ISO 9000 family that can be used for **certification**.
- There are **16 other standards** in the family that can help an organization on specific aspects such as performance improvement, auditing, training...

The ISO 14000 family

- **ISO 14001** is the standard that gives the requirements for an **environmental management system**.
- **ISO 14001:2015** is the latest, improved version.
- It is the **only standard** in the ISO 14000 family that can be used for **certification**.
- The ISO 14000 family includes **21 other standards** that can help an organization specific aspects such as auditing, environmental labelling, life cycle analysis...

The ISO Survey

**Worldwide total of
ISO 9001:2000 certificates
December 2003 to December 2007**

**Annual growth of
ISO 9001:2000 certificates
December 2003 to December 2007**

**Top 10 countries for
ISO 9001:2000 certificates**

The ISO Survey *(cont.)*

- The **worldwide total of certificates to ISO 9001:2001** at the end of **2007** was **951 486**.
- This was **increase of 6 %** over 2006 when the total was **896 929** certificates.
- Certificates had been issued in **175 countries** compared to **170** the previous year.

The ISO Survey (cont.)

**Worldwide total of
ISO 14001:2004 certificates
December 2005 to December 2007**

**Annual growth of
ISO 14001:2004 certificates
December 2005 to December 2007**

**Top 10 countries for
ISO 14001:2004 certificates**

The ISO Survey *(cont.)*

- The **worldwide total** of **ISO 14001** certificates at the end of **2007** was 154 572.
- This was an **increase of 21 %** over 2006 when the total was 128 211.
- Certificates had been issued in **148 countries** compared to 140 the year before.

Benefits of ISO 9001 and ISO 14001

- International, expert consensus on state-of-the-art practices for quality and environmental management.
- Common language for dealing with customers and suppliers worldwide in B2B.
- Increase efficiency and effectiveness.
- Model for continual improvement.

Benefits of ISO 9001 and ISO 14001 *(cont.)*

- Model for satisfying customers and other stakeholders.
- Build quality into products and services from design onwards.
- Address environmental concerns of customers and public, and comply with government regulations.
- Integrate with global economy.

Benefits of ISO 9001 and ISO 14001 *(cont.)*

- Sustainable business
- Unifying base for industry sectors
- Qualify suppliers for global supply chains
- Technical support for regulations

Benefits of ISO 9001 and ISO 14001 *(cont.)*

- Transfer of good practice to developing countries
- Tools for new economic players
- Regional integration
- Facilitate rise of services
